

(from Lou Church, June 10, 2011)

Here are the Word and PDF files for the first cut of IBIS 5.1.

The following parts were not touched:

- Keyword hierarchy

- Section 6c

- Section 10

The Visio graphics are incorporated, and are followed by their ASCII versions.

The highlighted text indicates cross-references. The hyperlinks have not yet been made.

There is a non-sentence in the fourth full paragraph on page 113:

“However, for models measure the analog input response at the die pads or inside the circuit (this does not preclude tools from reporting digital D_receive and/or analog port responses in addition to at-pad A_signal response).”

Second paragraph of Section 9, p177—the following wording does not belong in a technical document:

“This methodology has the nice feature...”

A rigorous spell-check will be done before the document is finalized.

In the PDF file, there are several pages where the text appears to be in Bold. This is a glitch in the PDF processing and will be dealt with when the final document is prepared. (The text in the Word document is not in Bold.)
