	-	Purpose This document is a specification covering a methodology to enhance the quality of electronic component model files produced in conformance with the VID Juffer Information Specification (IIIG) Vesion 27.1 John Information on the ISI specification can be found on the ISI we apper
IBIŞ		https://www.ibit.org The purpose of the IBIS Specification is to provide a standard for model data exchange and thus to enhance the value of modeling and simulation.
IBIS QUALITY SPECIFICATION		The purpose of this IBIS Quality Specification is to provide a methodology for validating model data against the IBIS Specification and a means of objective measures of correlating model simulation results with measurements or order model simulations. By providing standards for validating, correlating, and replicating simulation results we seek to enhance the value of modeling and simulation.
		Adherence to the directions in this document does not guarantee quality. They serve to enhance the exchange of data. The quality of models and simulations is largely the result of market forces.
Version 3.0		This IBS Quality Specification is intended to supplement existing support metchanisms for producers of IBS files. Certain Vietnetors for State Community support are open to the public Details on the email reflectors and the model review service offered by the IBS Open Forum are described at the web URL given above.
		Revision History
Ratified September 15, 2023	- 1	Version 1.0 of this IBS Quality Specification was released in November 07 2004. Efforts for languated 2020 be burget of 2000 have calculated in a significanticly charged specification, released at Version 2.0. The quality level and correlation score numbering and lettering system has charged for Version 1.0. The dates numbers have also dataged, and chards calculated provides IBSCNE program have been removed from the IBS Quality Specification. Version 1.0 doed requirements taked to Level 4 – Substate for forwer avants. These include
		requirements for [Pin Mapping], [ISSO *], and [Composite Current] sections.
